## Revolutionary super light weight aluminum diecast body butterfly valve

### Features

#### Larger Flow Rate

Improved seat design (new cosine-curve seat) with rib disc (\*except 40mm type) can provide a larger flow rate and larger Cv value than existing models by maintaining mechanical strength of the disc.

\*Patent pending

#### Ultra Super Light Weight

Easy installation due to lighter weight (30% lighter than 702Z on 200mm types) and alignment ribs.

Examples of weight (Kg) with gear operator

	Conventional	702Z-2I	773Z-2J
	(Iron body)	(Aluminum diecast body)	
80mm	4.9	1.8	1.6
100mm	5.7	3.1	2.2
200mm	18.0	9.6	6.7

#### Remarkable Anti-Condensation Capability

Better anti-condensation capability is achieved by utilizing a high performance engineering plastic column. The high performance engineering plastic has excellent features such as low water absorption, high corrosion resistance, heat resistance, non-flammability as well as shock resistance, which is approximately four times that of hard PVC material.

The graph below shows anti-condensation performance under 5 degrees C cold moisture

#### Engineering Plastic Housing of Gear operator with stainless steel worm shaft

The high performance engineering plastic housing and stainless steel worm shaft are standardized to prevent corrosion for the 2J type worm gear operator.

#### Silicon Seat (50mm to 200mm)

The silicon seat is designed for chlorinated hot water applications for sanitary use in the 778Z.

#### PPS Disc

The PPS lined disc (poly phenylene sulfide with stainless steel core) is available up to 200mm and is an optimum product for corrosive fluids (subject to the performance of the rubber material). It works under the same concept as plastic butterfly valves whose contact parts with fluid consist of a plastic disc and rubber seat.

Remark 1: = Applicable

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.
